

Instruction for gutter hook bending tool

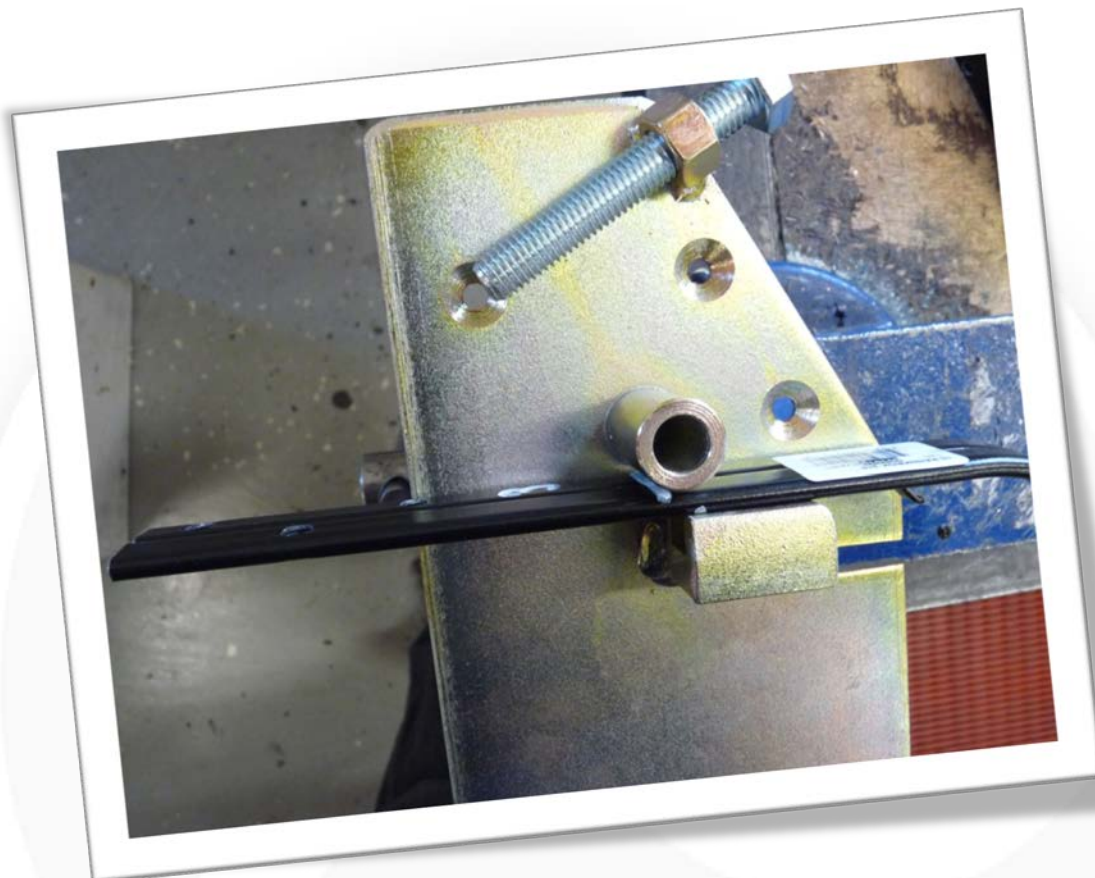

The gutter hook bending tool consists of two parts. A base plate and a handle.

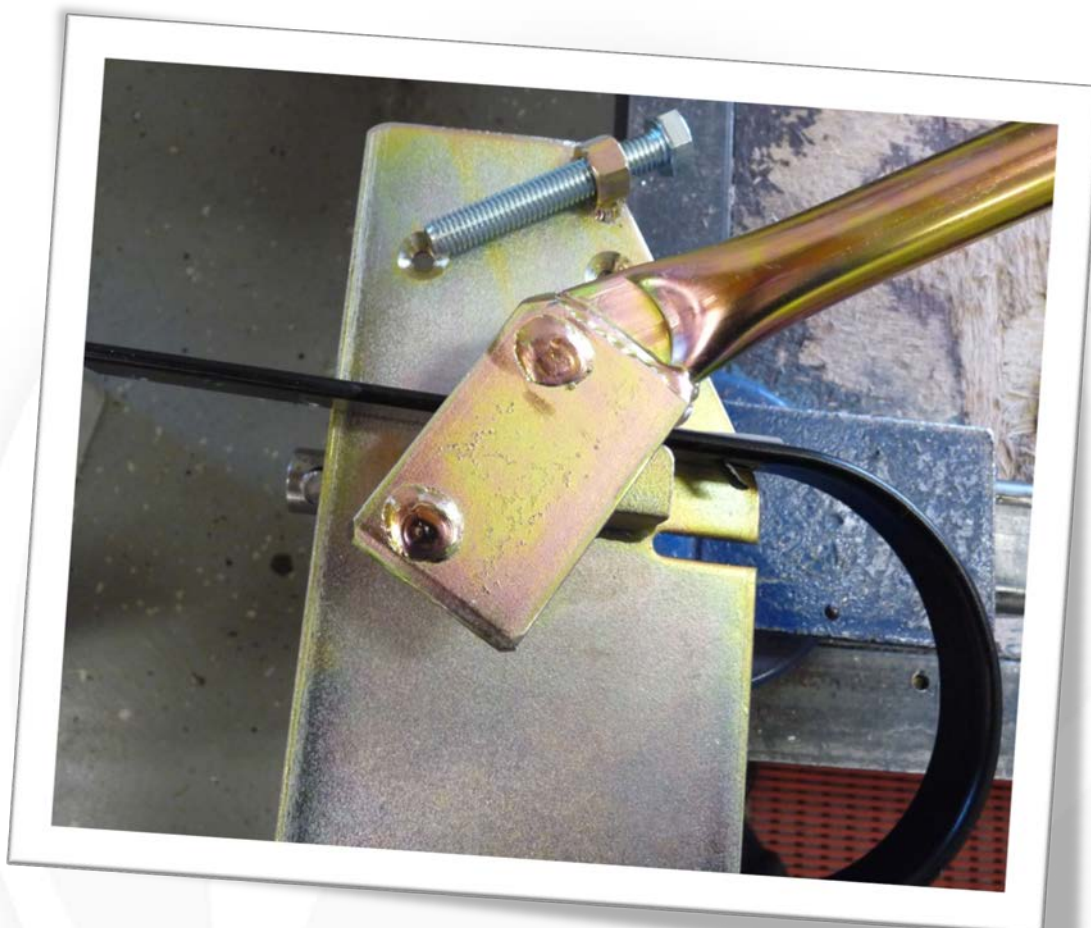

1. Mark the bending points on the back of the hooks according to the installation guide.

2. Lock the base plate in e.g. a vice.

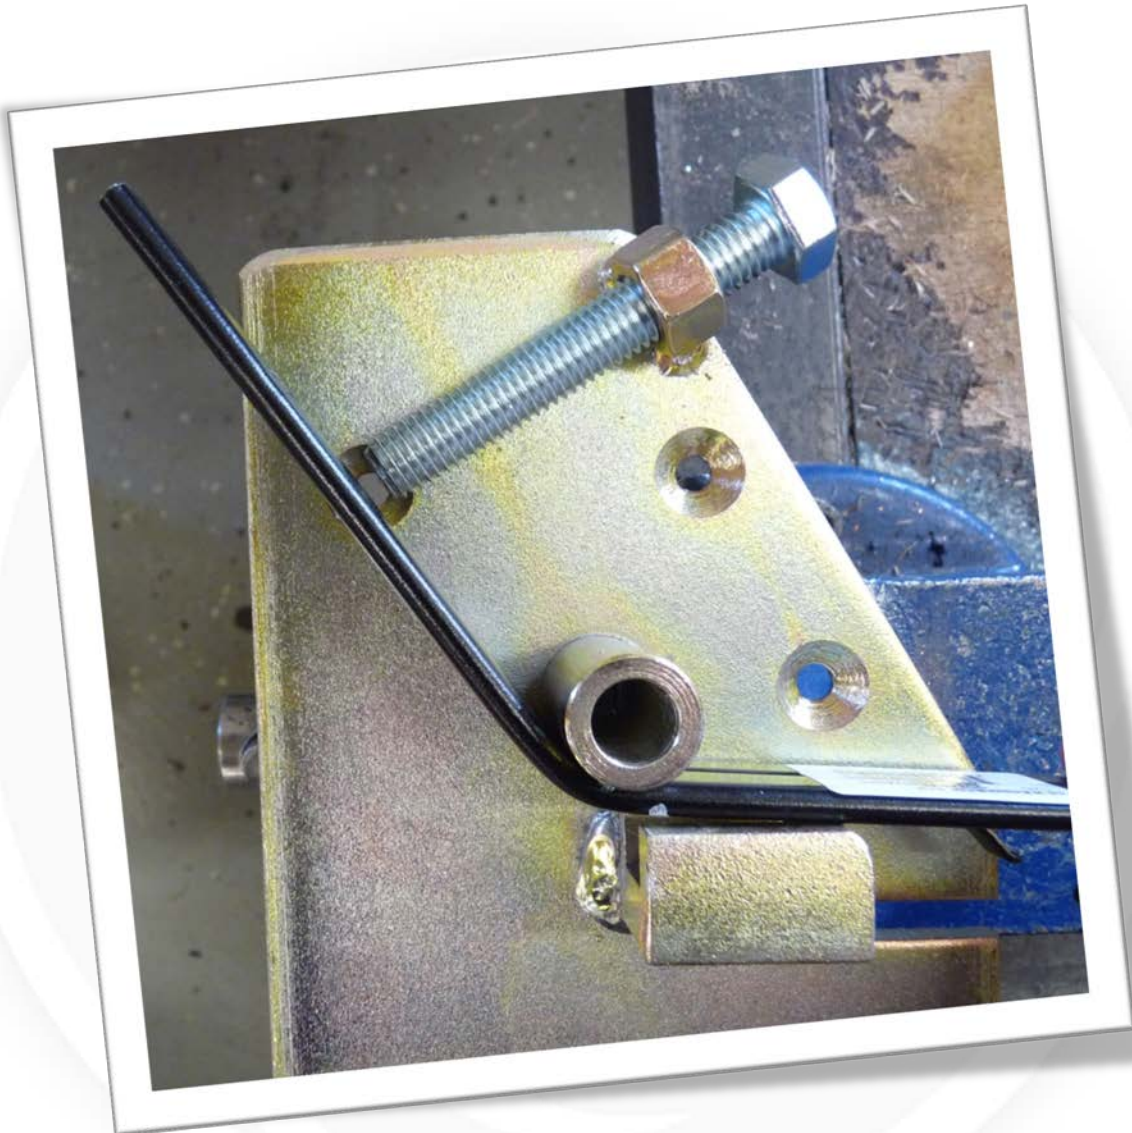

3. Place the gutter hook on the plate as in the picture. **Note! Be accurate in placing the gutter hook on the plate so that the mark on each hook always is in the same spot!**
4. Set the bending angle with the screw on the plate.

5. Place the handle on the plate as in the picture.

6. Bend the hook by pressing the handle so that the hook is bent towards the screw.

7. Remember that the hook springs back a bit. Experiment, but don't bend too much in the beginning.
