

VI ÄLSKAR REGN

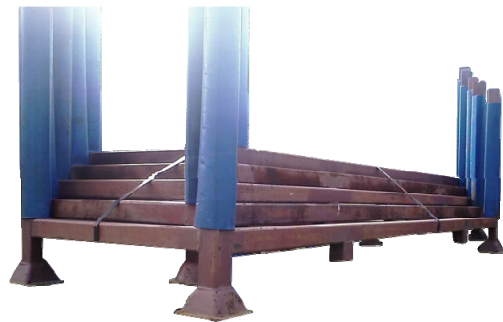

Returnable Crates (Steel Crates)

When crates are returned, it is of the highest importance that you stack and secure them according to the instructions in this document! This is for everybody's safety.

1. **Stack the crates in groups of 5.**
ABSOLUTELY NO MORE THAN 5!
2. **Secure each stack on at least one long end & one short end with suitable straps. Preferably use steel straps...**
3. **Pile up three stacks on top of each other as the illustration shows.**
4. **You can then load the piles with the short end towards the long side of the truck, if possible.**

Together with the load you should have a document stating how many crates you have returned and from which customer they are coming from! This is very important, because otherwise we cannot credit you for the crates.

You will then receive a credit note for the returned undamaged crates.

Loading piles on truck, with "straight" side towards loading side.

Unloading piles with tractor.
